

TABLE OF CONTENTS

1.	Introduction.....	1
2.	Today's Green Building Market.....	3
3.	Industry Growth To Date.....	17
4.	Forecasting Market Demand.....	31
5.	What Makes Green Buildings Valuable?.....	45
6.	Experiences of Green Marketing.....	57
7.	Selected Vertical Markets.....	71
8.	Marketing Green Technologies:.....	85
	Part One: Demand for Specific Green Building Measures in LEED Projects	
	Part Two: Marketing Energy-Efficient Technologies to Building Owners & Developers	
	Part Three: Case Study: Marketing Solar Energy Systems	
9.	Integrating Marketing Strategies.....	105
10.	Marketing Differentiation.....	119
11.	Selling Green Buildings.....	137
12.	Marketing Green Products.....	151
13.	Marketing Green Developments.....	171
14.	Looking To The Future.....	183
15.	Appendices:.....	193
	Part One: Resources for Marketers	
	Part Two: The People Problem	
	Part Three: Sustainable Engineering	

TABLES

2-1	Growth of LEED-registered projects by owner type, 2003-2004	
2-2	Growth of LEED-registered projects by area, 2003-2004	
2-3	Growth of LEED-registered projects by building type, 2003-2004	
3-1	Variables determining the rate of adoption of innovations	
3-2	Actual and projected LEED registered and certified projects, 2000-2004	
3-3	LEED registrations by owner type	
4-1	Incremental costs of 33 LEED certified projects	
4-2	Incremental costs of LEED-certifying two prototypical GSA projects	
4-3	Soft costs of LEED Projects	
4-4	Projected LEED registrations, project area and certification, 2004-2007	
4-5	U.S. non-residential building market, 2002-2004	
4-6	Projected LEED registrations, 2005-2010	
5-1	Understanding the benefits of green buildings	

TABLES (CONTINUED)

- 5-2 Examples of measurable economic benefits inside the building
- 5-3 Importance of typical intangible benefits outside the building
- 6-1 Response to the emerging market for sustainable design services
- 6-2 Most effective means for marketing sustainable design services
- 6-3 Perceived barriers to incorporating sustainable design and LEED
- 6-4 How to increase comfort level of clients
- 7-1 Higher education project types built or in design (2001-2004)
- 7-2 Specific sustainability goals in higher education building programs
- 7-3 Barriers to implementation of sustainability goals in campus projects
- 8-1 Specific LEED points attributed to LEED-certified projects
- 8-2 Estimated *minimum* annual market for green building measures in LEED-registered Projects (actual market may be much larger for some)
- 8-3 Considerations for solar use in future projects
- 8-4 Economics of solar electric power use in buildings
- 10-1 LEED registrations by state (selective), 2004
- 10-2 Strategic positions
- 10-3 Characteristics of respondents to technological innovations
- 11-1 Sustainability fact sheet for Alcyone Apartments, Seattle
- 12-1 Green products used in LEED-certified projects
- 12-2a Four LEED-certified projects and materials credits
- 12-2b Percent of recycled credit from each CSI division
- 12-2c Percent of total materials cost from each CSI division
- 12-3 Value of recycled-content materials by CSI division
- 12-4 Local/regional content in a Northwest public office building project
- 12-5 Certified wood use in three West Coast office buildings, 2001-2003
- 12-6 LCA sample analysis
- 15-1 Demographic changes, 1995-2010
- 15-2 Comparison of post-modern vs. sustainable engineering

FIGURES

- 3-1 Diffusion of innovation: adoption rates by psychographic type
- 3-2 Rate of adoption with critical mass
- 3-3 Green building activity, 2000-2004
- 4-1 Long-term projection of cumulative LEED registrations to 2010
- 8-1 Integrated design process
- 10-1 Segmentation, targeting, positioning and differentiation
- 10-2 Market positioning for design firms
- 10-3 Marketing professional services
- 12-1 Advertisement for a green building developer
